

MOVEQ UI/UX BLUEPRINT

SYSTEM DIRECTIVE: MODERN RETRO-TECH / PRODUCTION-READY STANDARD

ATTN DESIGN TEAM: This blueprint outlines the exact visual grammar for the MoveQ Logistics Platform. It addresses the precise blending of raw industrial retro character with high-fidelity production polish. Adhere strictly to the specs below to ensure consistent psychological grounding, clear action mapping, and modern aesthetics.

1. CORE ARCHITECTURE PATTERN

The layout uses a **Refined Neo-Brutalist (Modern Retro-Tech)** paradigm. It mimics industrial tracking terminals from the 90s but introduces the spatial breathability, clean spacing, and structural logic of top-tier modern iOS/Android interfaces.

- **The Frame Grammar:** Retain the iconic box layouts, but do **not** use pure black lines (`#000000`). Every structural frame, divider, and container must render in deep Charcoal Grey (`#2A3F54`).
- **Stroke Hierarchy:** Primary dynamic interactive elements (CTA buttons, active system viewports, interactive inputs) receive a heavy outline stroke weight. Static read-only components (informational background cards, data cells, address panels) use a lighter, thin stroke weight to separate background content organically.
- **Spatial Breathing Space:** Do not crowd text or inputs against borders. Maintain a minimum internal padding of `16px` to `20px` within all modules to ensure modern premium execution.

2. TECHNICAL COLOR MAPPING (60-30-10 RULE)

Color application follows strict functional definitions to maintain absolute cognitive clarity for operational personnel while actively minimizing eye strain over long operational cycles.

ROLE & RATIO	HEX VALUE	OPERATIONAL APPLICATION & INTENT
Canvas Base (60%)	 #FDF8F3 Hardware Cream	Applied across the absolute main app background. Eliminates glare outdoors and shields personnel from the fatigue triggered by clinical white panels.
Structure / Brand (30%)	 #16C47F Mint/ Teal Green	Used for dynamic application header banners, tracking status nodes, structural headers, and successfully processed state steps.
Action Hook (10%)	 #FF4500 Burnt Orange	Reserved exclusively for immediate critical actions. Used for Scan QR buttons, Confirm Delivery triggers, and critical live warnings.
Typography / Text	 #2C3338 Soft Charcoal	All primary readable text and descriptive input content. Softer contrast than pure black, significantly extending comfortable usage duration.

3. TYPOGRAPHY & MICRO-DETAILS

- **Dual-Engine Font Strategy:**
 - All static labels, recipient names, addresses, and transactional prompts must render in a highly readable, clean modern geometric **Sans-Serif** family.
 - All specific data fields, unique tracking IDs (**MQ-4471-2025**), timestamps, and status strings must render in a precise system **Monospace font** to cement the physical logistics aesthetic.
- **High-Fidelity Finishes:** All large flat color fields must avoid generic solid blocks. Inject subtle gradients, matte material finishes, or soft vector drops within background elements to ground components elegantly in 3D digital space.
- **Advanced Form Construction:** Input blocks within the **Shipment Confirmation Form** require micro-detailed guidance. Anchor low-contrast structural icons (e.g., a tiny phone glyph inside the mobile field, a postal mark inside zip boxes) near field parameters to guide input seamlessly.
- **High-Tech Scanners:** Viewports like the **QR Code Scanning Portal** must feature illuminated target lines, technical alignment marks, and real-time visual tracking reticles overlaying the camera feed.

4. DESIGN REFERENCE ARTIFACT

This document directly cross-references and codifies the structural execution established in the approved **Final Aesthetic Mockup (Artifact: MoveQ Modern Retro Dashboard)**. Ensure all screen layouts, grid lines, form heights, and element radii mirror the premium vector quality demonstrated in that final asset generation block.
